Complementary modules are features, not provided in standard Dolibarr distribution, that you can add to Dolibarr by adding new files components.

For a list of standard modules, see page [List of Modules](#).

The DoliStore web site offers an area to download modules built by external editors: [DoliStore.com](#).

If you are a module editor, feel free to complete this wiki with a page dedicated to your module, and to submit it on DoliStore.
